WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

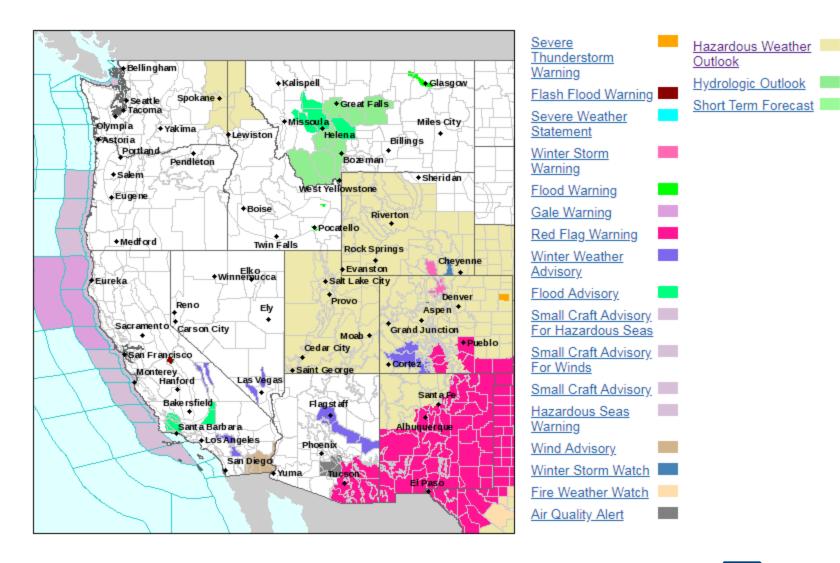

A weather system continuing to move SE out of California will bring lingering cloudiness over the eastern and southern portions of Northern California today. A few showers are possible today from Lake Tahoe southward along the Sierra. Temperatures will be about 10 degrees warmer today, with warmest inland valleys around 80 degrees. Areas of gusty northerly winds are in place through tonight, with peak gusts mostly 25-30 mph in the usual windiest north wind locations, followed by much lighter winds the rest of the week. A drying trend will take place as high pressure prevails the rest of this week, with warmest inland areas in the mid and upper 80s. There is a small chance of isolated mountain showers in the north this weekend, as a weak weather system moves through the region bringing slightly cooler temperatures. Warmest areas in the lower 90s are possible early next week behind the weekend weather system.

SOUTHERN CALIFORNIA

An area of low pressure currently over Southern California will bring scattered showers and isolated thunderstorms mainly to Southern California and the Sierra through Wednesday afternoon. However, a few showers and an isolated thunderstorm will be possible across the rest of Central California this afternoon. Most locations will receive less than a half inch of rainfall with this low pressure area. The snow level will be around 7,000 feet. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert locations through this evening. Temperatures will continue to be well below normal through Wednesday, with upper 40s and 50s across the mountains and 60s to low 70s in the valleys. Significant warming and drying will take place Thursday through Saturday as a ridge of high pressure builds into California from the Pacific Ocean. Temperatures will be 10 to 15 degrees above normal and minimum humidity will be mainly in the teens Friday and Saturday. Winds will be light Thursday through Saturday. The ridge of high pressure will weaken as a trough moves inland into the Pacific Northwest bringing a slow cooling trend as well as a gradual increase in humidity Sunday through early next week.
